

On the right track with Welser profiles

Rail travel is simply better with Welser profiles

Our foundations:

- decades of experience in rail vehicle construction
- a comprehensive range of machines with more than 60 roll forming lines
- everything from a single source

For these customers there is no way around profiles made by Welser:

SIEMENS

STADLER

CAF

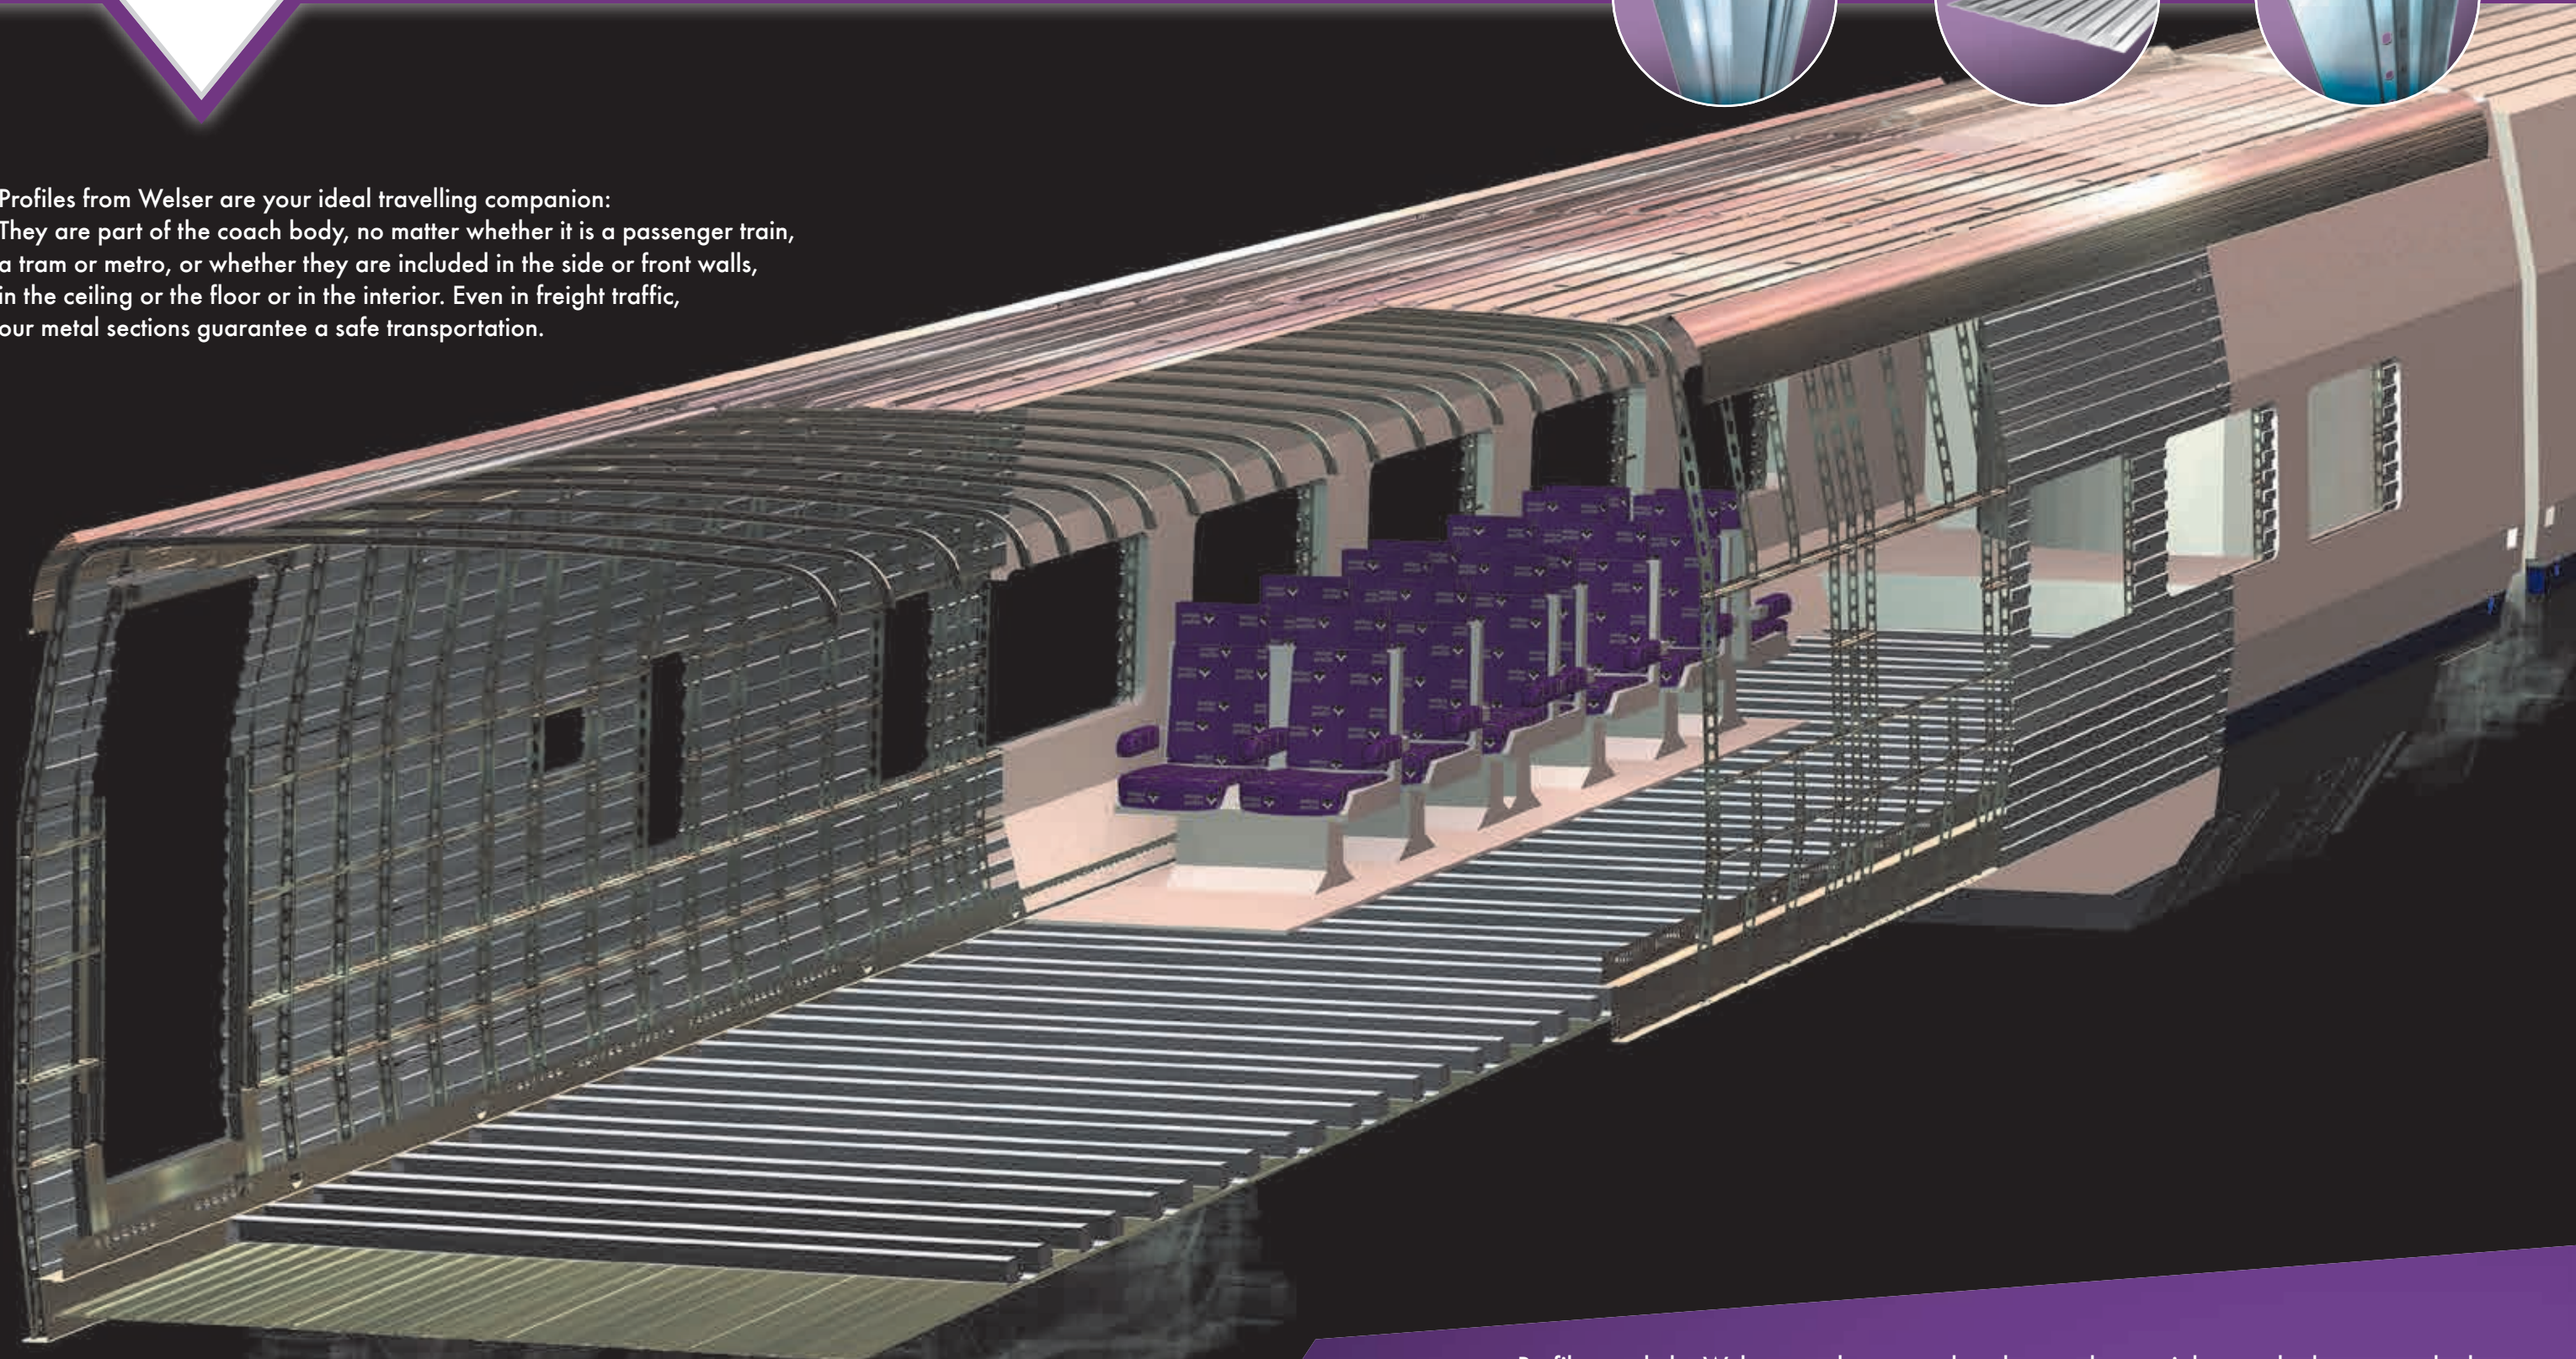

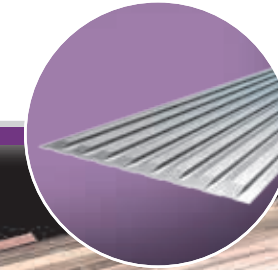

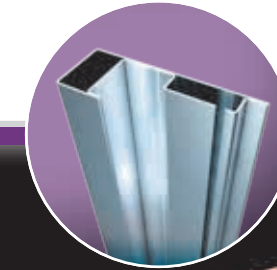

pesa

BOMBARDIER
the evolution of mobility

An excursion through our portfolio

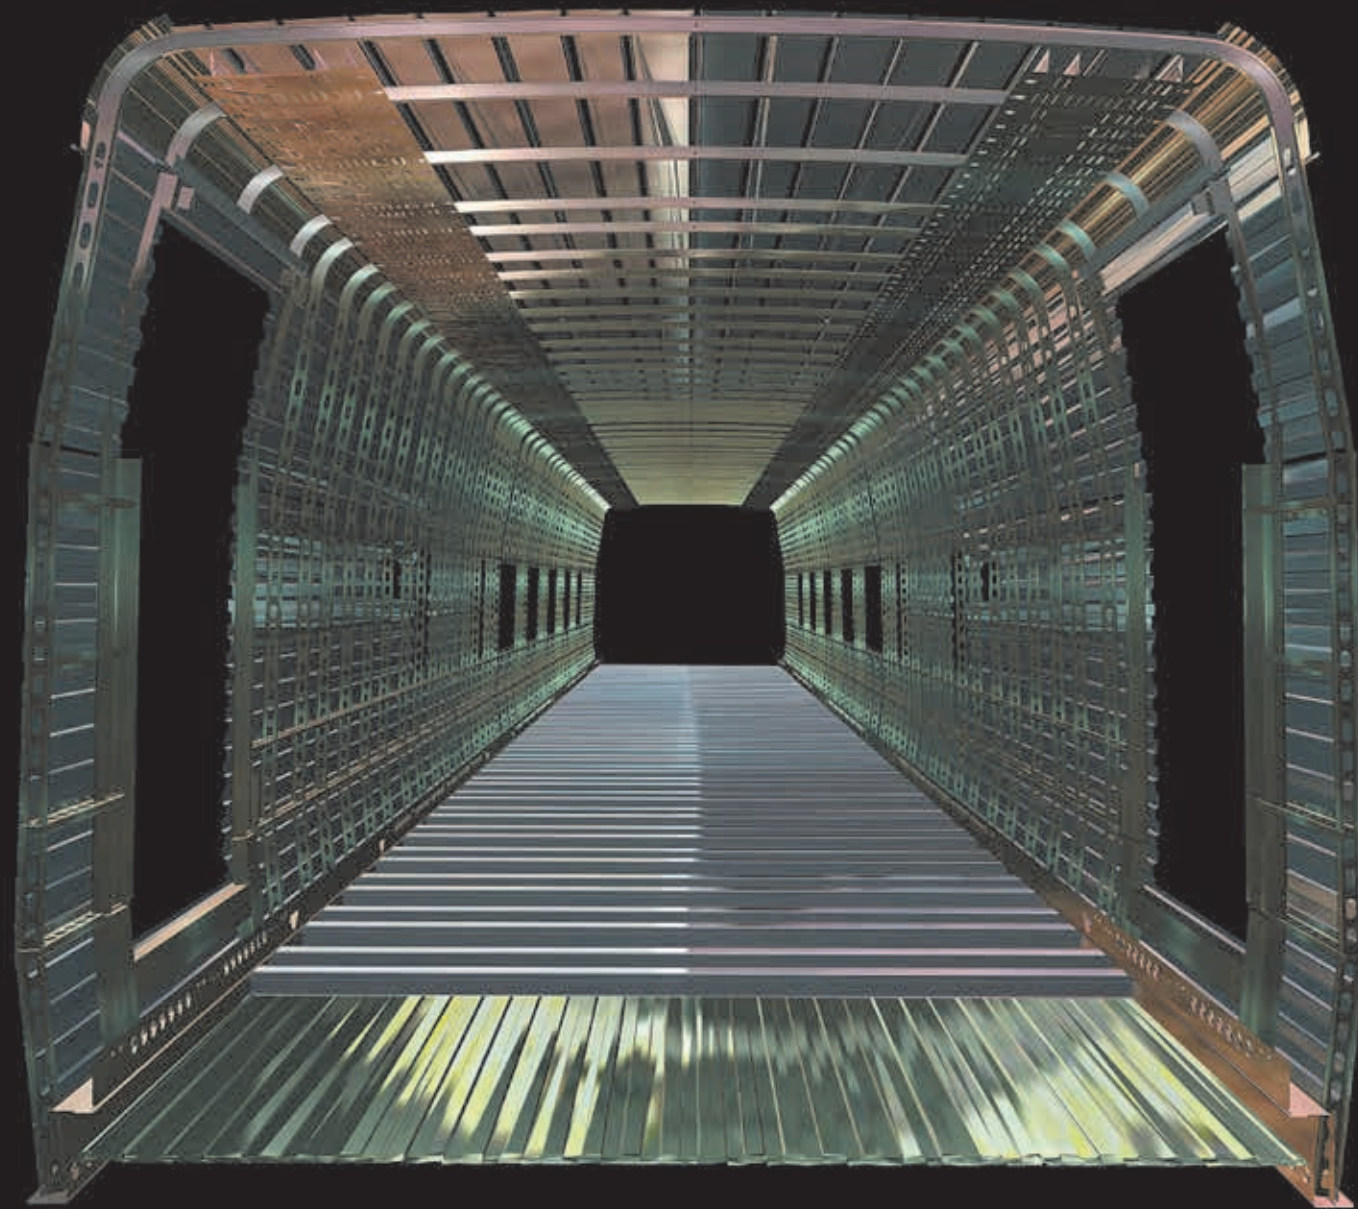

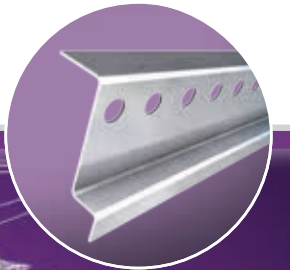

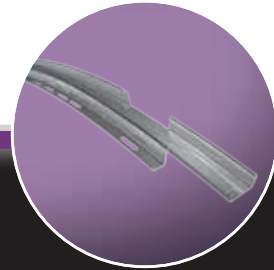

Welser Profile is the leading manufacturer of roll-formed special sections, tubes and complete, customized profile systems made of steel and non-ferrous metals for components such as coach bodies and interior furnishing. Profiles made by Welser are unique as they are customer specific in functional terms, design, logistics and additional services offered.

Profiles from Welser are your ideal travelling companion: They are part of the coach body, no matter whether it is a passenger train, a tram or metro, or whether they are included in the side or front walls, in the ceiling or the floor or in the interior. Even in freight traffic, our metal sections guarantee a safe transportation.

Profiles made by Welser may be open, closed, curved or straight, punched or unpunched, simply sectioned or individually crushed according to customer specifications; – and in any case they deliver what they promise, even when talking about extra-lengths and about long term solutions.

We have got what it takes ...

Your advantages:

- complex or curved profiles up to 27 m long
- exact dimensions even of profiles with a thickness of up to 8mm
- finished components and complete systems including all the functional advantages they offer
- very tightly controlled straightness and twist tolerances to simplify assembly
- individual solutions

A variety of complex forms,
even when there is a need
for thick profiles

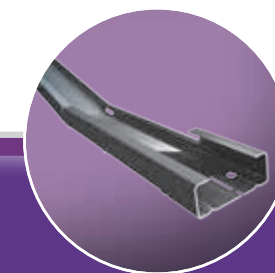

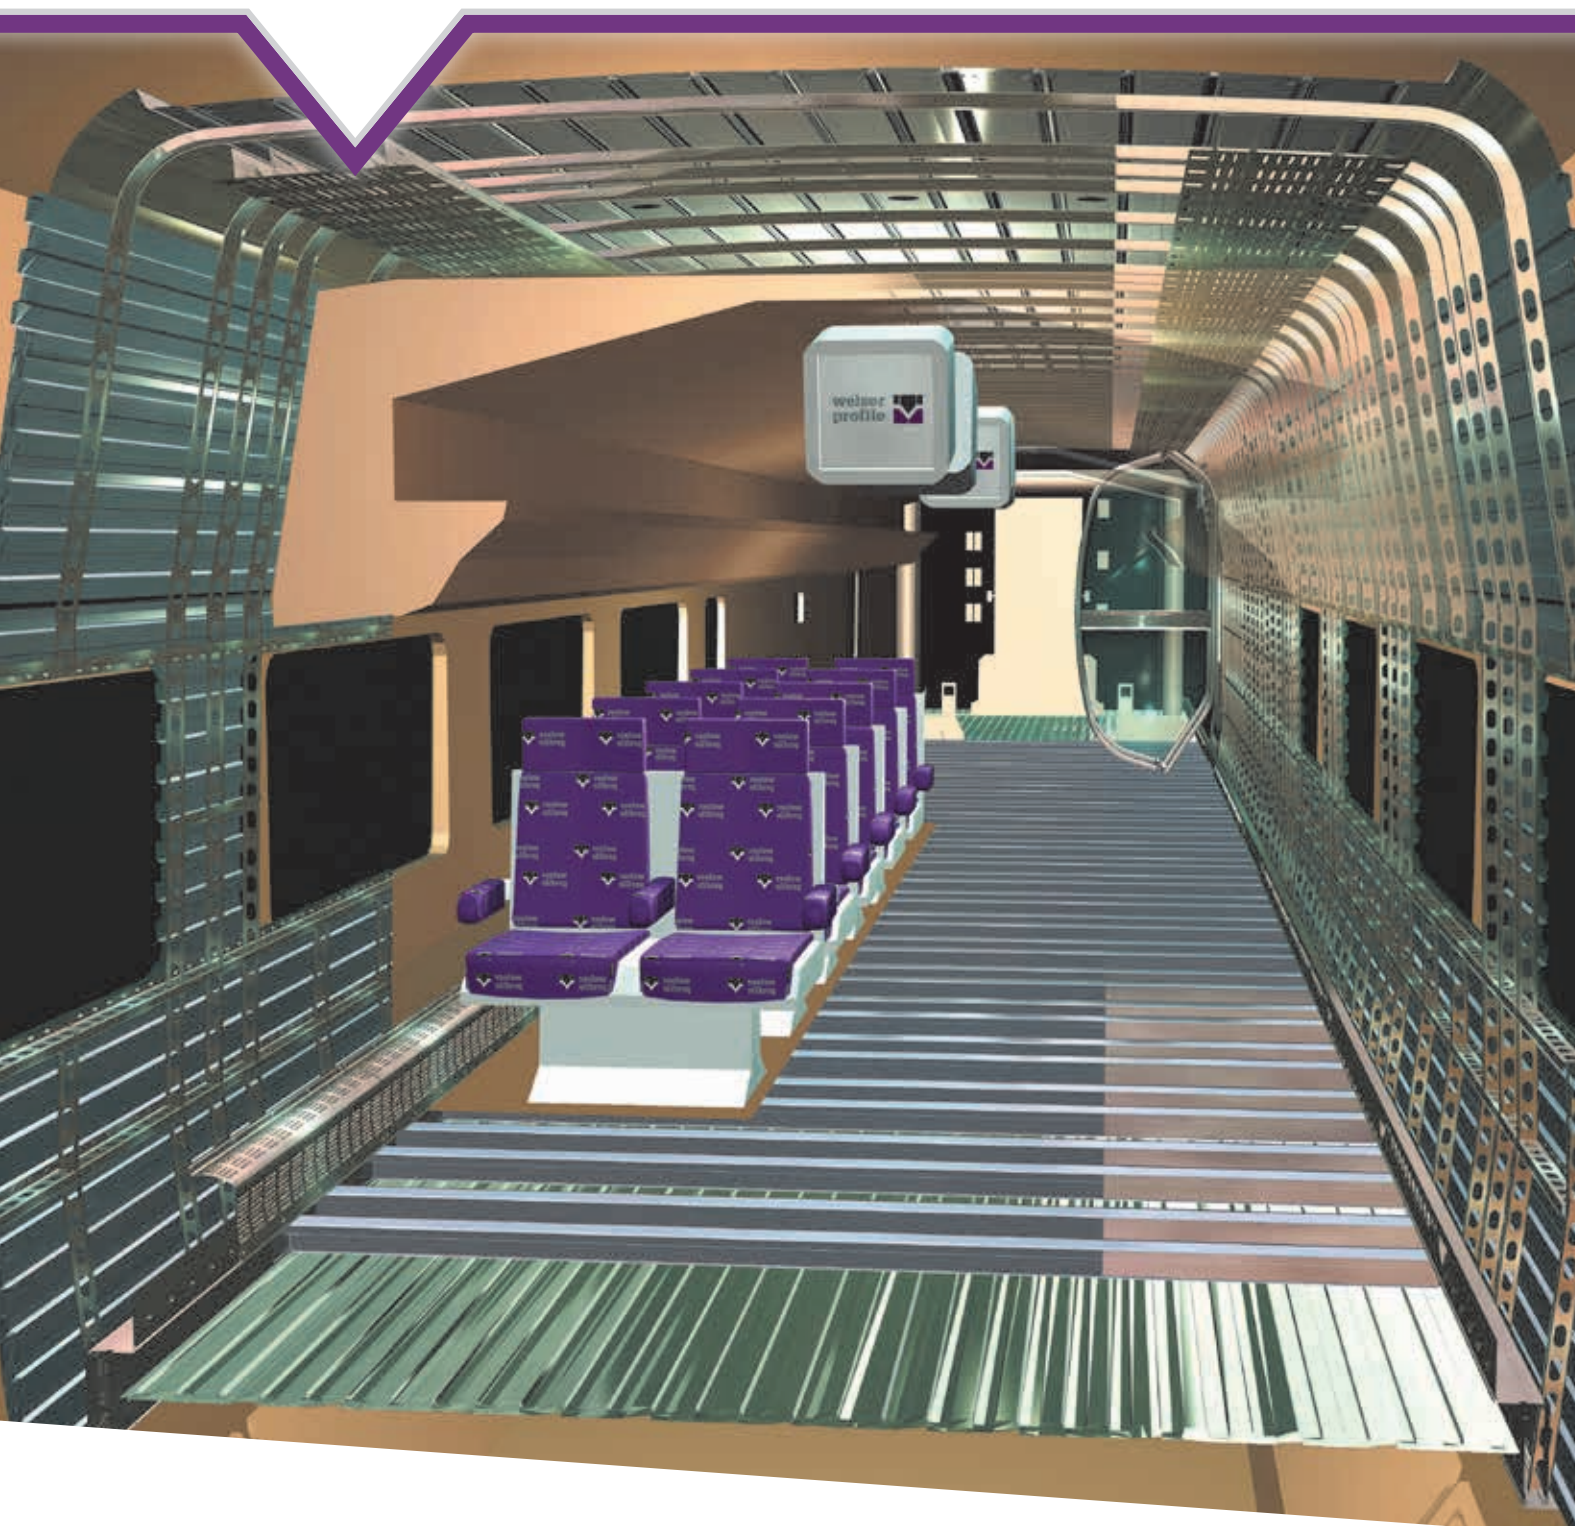

In order to ensure the consistent quality of our profiles, we use only high-grade steel; moreover, we have implemented a preventive inspection plan and continuous inspections are everyday life. We are pleased to provide evidence by means of successful certifications according to ISO 9001 and ISO/TS 16949 and among various other system certifications we are also certified according to DIN EN 15085.

By means of our in-house tool manufacturing we are able to even produce heavy gauge profiles with tight tolerances under controlled processes.

Always well equipped

Underneath or top

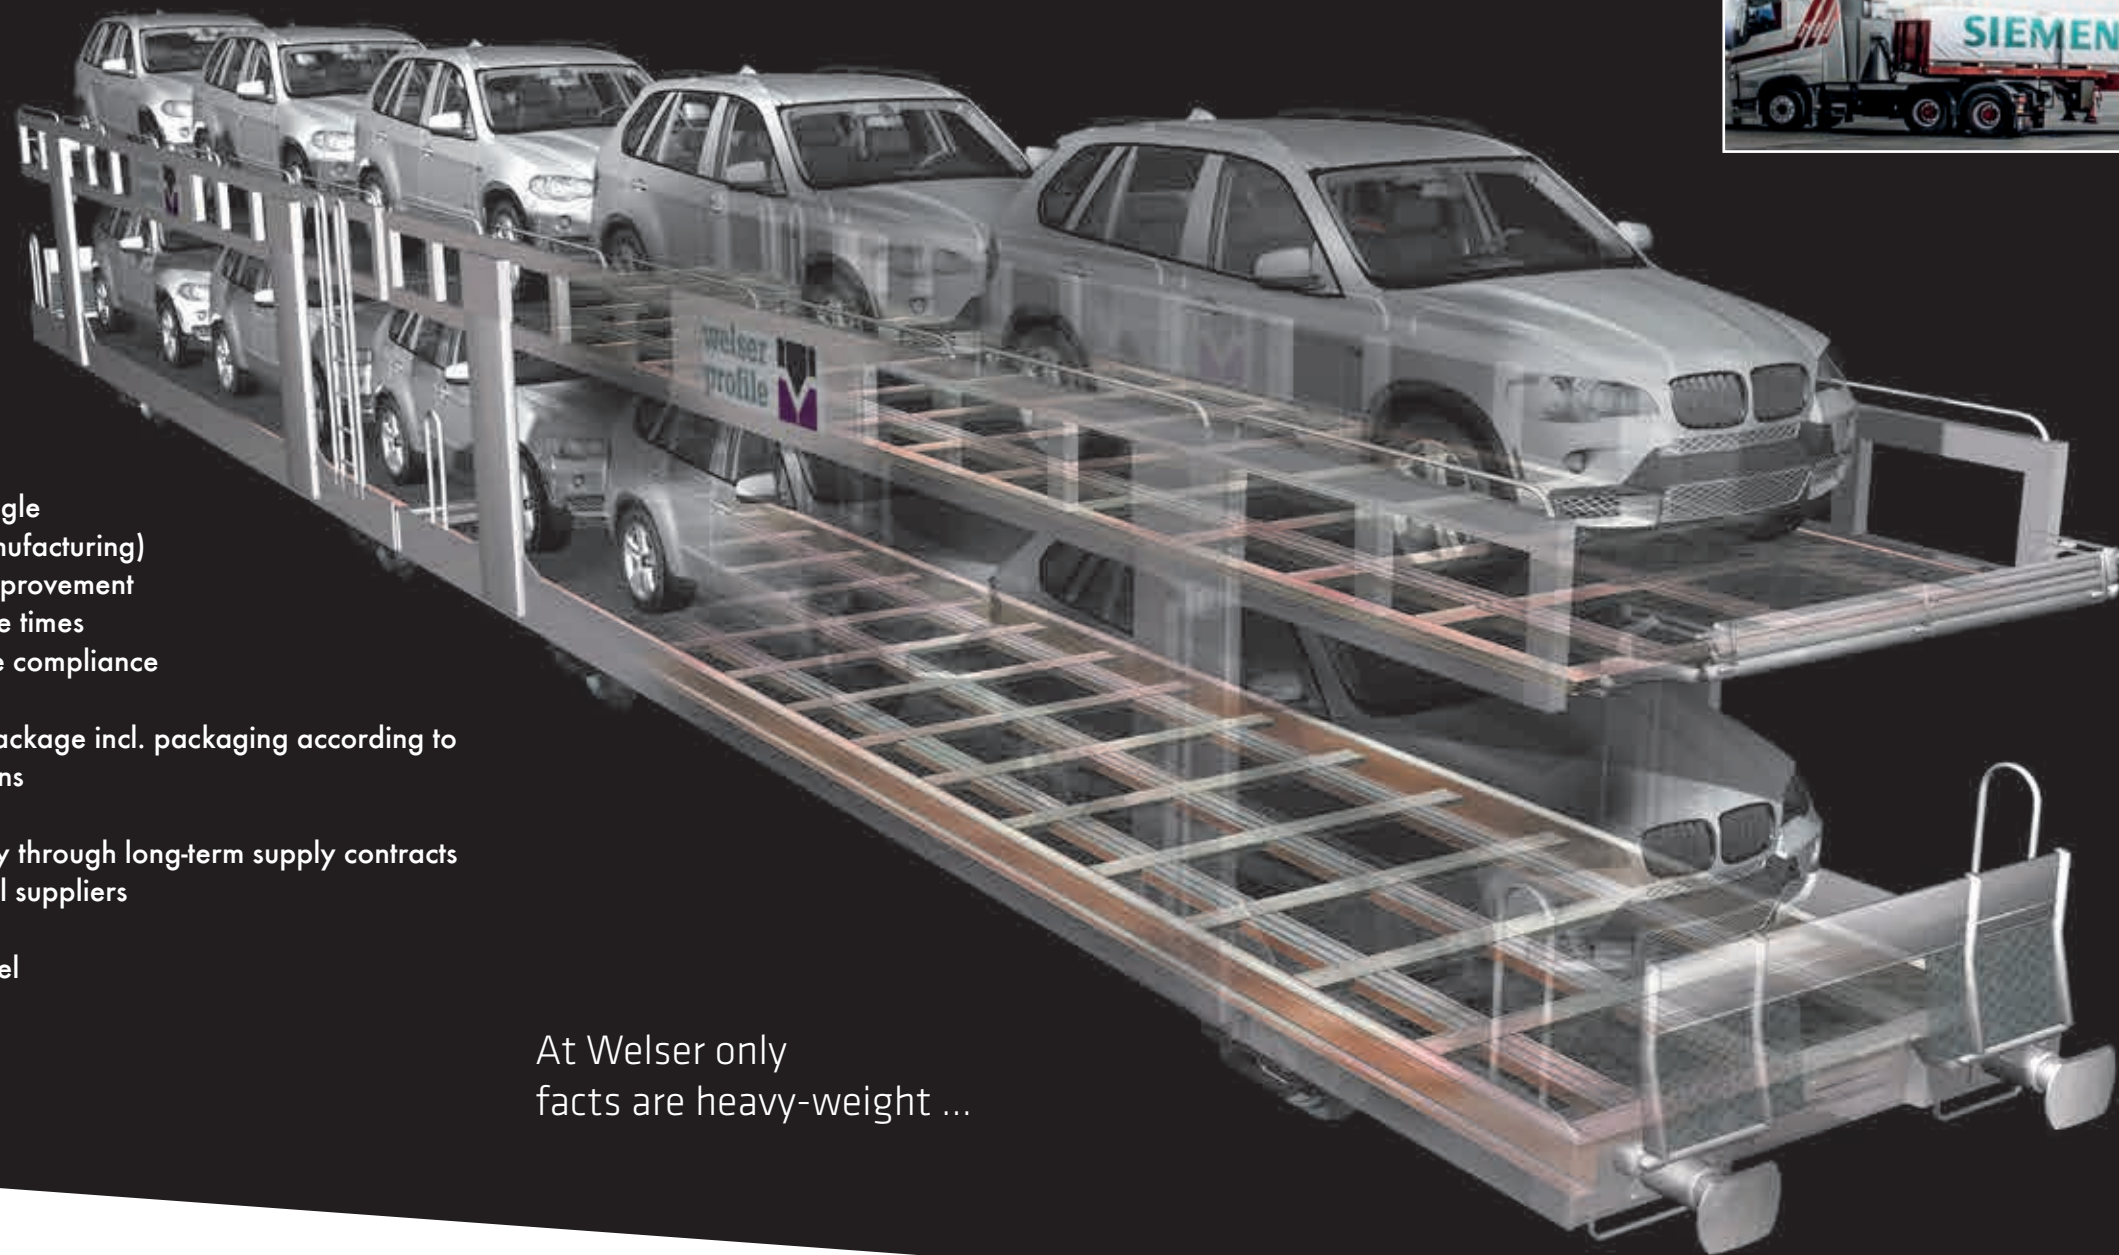

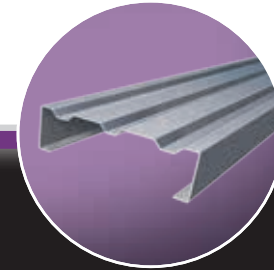

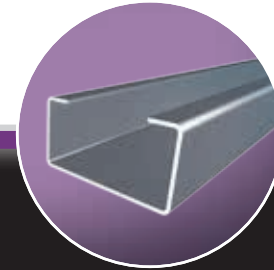

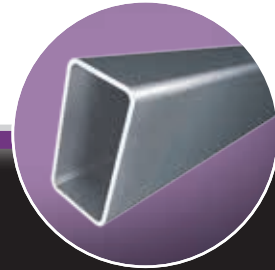

Our profiles
are something to be
proud of.

- longitudinal floor bearers
- underbody profiles
- crossbeams
- stiffening plates
- ceiling and window mirrors
- ceiling crossbeams
- sidewall profiles
- cable ducts
- guide rails
- door posts
- seat rails
- convector profiles and many more

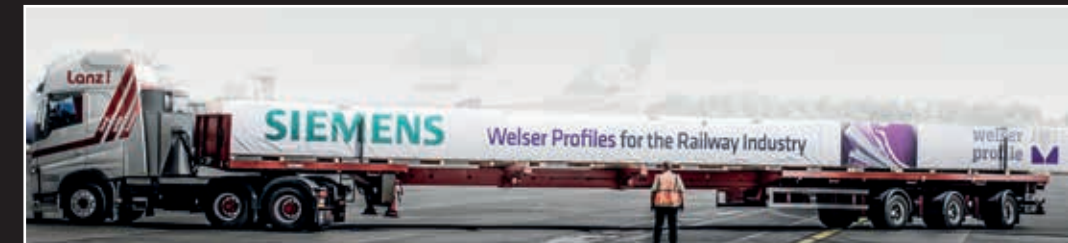

And even more support

Trailblazing in terms of service

- Everything from a single source (own tool manufacturing)
 - continuous improvement
 - short response times
 - strict deadline compliance
- Elaborate logistics package incl. packaging according to customer specifications
- High supply reliability through long-term supply contracts with primary material suppliers
- Projects at global level

At Welsch only
facts are heavy-weight ...

Our aim is to provide you,
with the optimum solution for your application.
In this context sometimes less is more: A complex application doesn't always require
a complex metal section – a high value section does not necessarily imply high costs.
Our experts are here to help you as early as in the planning and design stage.

More than 1800 employees across the sales offices and the 3 production plants in Ybbsitz, Gresten (in Austria) and Bönen (in Germany) are continually working to successfully bring the requirements of our international customers to fruition.
