

## The world of work

The interior design industry is focussed on creativity, function and design. Our sections stand out with their bespoke surface finishes and the tightest tolerances possible. From individual sections to complete systems, we have the potential to transform your ideas into reality. We have the expertise and production capabilities to meet your precise individual requirements.

### Aesthetics

Dimensional Accuracy

Functionality

Easy To Assemble

## OUR CAPABILITIES

We welcome the opportunity to share our extensive experience in system development. We develop complex cross sections in collaboration with our customers by selecting the most suitable combination of proven and modern production techniques:

- Diverse range of joining techniques and pre-assembly of plastic components and rubber seals onto the section
- Processing of pre-treated strip material in different designs (imitation wood, paint,...)
- Integration of functional items such as covers or rubber seals
- Further examples can be found on our website [www.welser.com](http://www.welser.com)

Welser sections used in shopfitting are functional and aesthetically pleasing.

Partitions made by Welser are both modular and dimensionally stable.

## WHY WELSER?

- Embossing and hole-punching operations used to attach fitting parts are carried out during the production process to a **high degree of dimensional accuracy**
- Precision manufacturing to meet **visual requirements**
- Production of **surfaces suitable for subsequent chrome plating** using our special forming technique
- **Ready foiled products** reducing the need for further surface treatment
- Fulfilling key requirements and **saving weight** where possible using production techniques such as clinching or integrated laser welding
- Production to meet specified tolerances allowing products to be **easily assembled**
- Optimal **light reflection** by using coated strip material or special material with a high grade of gloss
- Fulfilling **load bearing requirements** alongside multifunctional requirements such as the inclusion of non-visible cooling elements or sprinklers
- Transforming your **design ideas** into reality

The diverse range of surface finishes available at Welser make its sections stand out in the furniture industry

Meeting required tolerances guarantees a comfortable fit between the different sections and materials used in suspended ceiling structures.

## INFO – Welser Profile

- Manufacturer of bespoke sections and tubes made from steel, stainless steel and non-ferrous metals
- Family organisation currently in its 11<sup>th</sup> generation
- More than 19,000 different profiles produced to date
- Total manufacturing area 420,000m<sup>2</sup>
- Approx. 1,750 employees
- 3 production sites
- 12 sales offices
