

Load securing for coils/rings at Welser

Dear customers,
Dear freight carriers,

In order to ensure smooth and efficient loading and unloading for all trucks, which also will make sure that you as our customers/suppliers are satisfied, we would like to ask you to consider a few important points when you wish to collect/deliver your goods from us:

1.1 Shipping

In order to comply with the statutory provisions, it is necessary to stow the loaded goods in such a way that transport safety is guaranteed.

(Austria 22 Motor Vehicles Act Amendment § 101 Para. 1, Germany Road Traffic Act §22 Para. 1)

Loading takes place with a form closure (blocking the load) so that the load is properly secured by the truck drivers.

It is expressly required that you make use of the help provided by the external transport personnel

in consultation with our internal logistics personnel.

1.2 Securing the load

In accordance with the statutory regulations, the truck drivers are responsible for securing the load safely. This also means they are responsible for carrying and using the appropriate aids:

- **Enough anti-slip mats for each trough**

- **At least two lashing chains for each trough, although three would be better**
- **Length approx. 4 m**

Load securing for coils/rings at Welser

- Two edge protectors for each chain

- Three loop lashings for each trough with a minimum length of 1 m

If you follow all these instructions and tips, there is nothing to stop loading and unloading from going quickly and smoothly. Please do not hesitate to get in touch if you have any questions.

If you do not carry the correct aids with you, then the loading personnel will not be able to load your goods.

Any costs incurred from this must be borne by the freight forwarder.

We look forward to welcoming your vehicle to Welser.

Kind regards,

Welser Profile
